PHATAN MOHAMMAD IMRAN KHAN

Frontend-Focused MERN Stack Developer | React & Node.js
Hyderabad, India
phatanmohammadimrankhan@gmail.com
+91-7013859797

PROFESSIONAL SUMMARY

Frontend-focused MERN Stack Developer with 4+ years of experience building scalable, high-performance web applications using ReactJS and integrating with Node.js/Express-based REST APIs. Strong expertise in React, Redux Toolkit, TypeScript, API integration, authentication flows (JWT/OIDC), and performance optimisation. Well-versed in MERN architecture, middleware concepts, MongoDB schema basics, and secure application design. Experienced in Agile environments, delivering enterprise-grade applications for global clients, including Aspen Publishing and Daimler.

TECHNICAL SKILLS

Frontend

ReactJS (Hooks), JavaScript (ES6+), TypeScript, HTML5, CSS3, Tailwind CSS, Material UI, Responsive Web Design

Backend (Exposure & Integration)

Node.js, Express.js, RESTful APIs, Middleware Concepts, JWT Authentication Flow, Role-Based Access Control (RBAC)

Database

MongoDB (Schema & CRUD Concepts)

State Management

Redux Toolkit, Redux Thunk, Context API

API & Tools

Axios, Async/Await, Postman, Swagger, Thunder Client

Authentication & Security

JWT (Conceptual & Integration Level), OIDC, IAM, MS Authenticator, Protected Routes

DevOps & Tools

Git, GitHub, JIRA, Agile/Scrum, CI/CD Awareness, AWS (EC2 Basics), Environment Variables (.env)

PROFESSIONAL EXPERIENCE

Tata Consultancy Services (TCS)

Frontend / MERN Stack Developer (Frontend-Focused)
Mar 2022 – Present
Hyderabad, India

Client: Aspen Publishing **Dec – 2024 - Present**

Project: Casebook Cover – Learning Management System (LMS)

Worked on an enterprise LMS platform supporting digital assessments and quizzes.

Responsibilities:

- Enhanced quiz functionality from single-answer radio buttons to multi-answer checkbox-based selection (up to 2 answers).
- Implemented **conditional logic to dynamically render** checkbox-based questions in the middle of quizzes.
- Integrated React frontend with **Node.js/Express REST APIs using Axios**.
- Validated **API request/response payloads** and handled error states efficiently.
- Fixed production bugs related to quiz rendering, API response mismatches, and state persistence.
- Collaborated with backend developers to refine API contracts for updated multi-select evaluation logic.
- Participated in API testing and validation using Postman and Swagger.
- Worked in Agile sprints, resolving UAT and production issues.

Client: Daimler **Jan – 2024 – Nov - 2024**

Project: Volume Incentive Program (VIP)

Enterprise-level incentive management platform.

Responsibilities:

- Built scalable React components and **role-based dashboards** driven by backend permission APIs.
- Integrated authentication using **OIDC and IAM-based secure access**.
- Consumed and validated **REST APIs developed in Node.js**.
- Assisted the backend team during debugging of authorisation and validation middleware issues.
- Optimized performance using **lazy loading and code splitting**, reducing initial load time by 30–35%.
- Configured environment-specific variables securely using .env files, supported post-deployment bug fixing and regression testing.

Client: Daimler **April – 2022 – Dec - 2023**

Project: Dealer Profile Platform (DTFS)

Dealer onboarding and profile management system.

Responsibilities:

- Developed multi-step onboarding forms using **React, Formik, and Yup**.
- Implemented "Save as Draft" functionality synchronised with backend persistence APIs.
- Built role-based dashboards with secure access integration.
- Participated in API integration testing using **Postman** and issue resolution.
- Ensured responsive UI and accessibility compliance using frameworks like **Material User Interface and libraries like TailwindCSS**.
- Implemented **Role-Based authorisation middleware** to differentiate and control requests based on user roles and permissions (RBAC)
- Integrated **JWT based authentication and authorisation** to secure protected routes and ensure session management
- Configured **API Rate limiting middleware** to enhance system reliability, prevent abuse, and improve application security
- Contributed to **MongoDB schema design using Mongoose**, creating collections aligned with business requirements and ensuring optimized data modelling

---

CERTIFICATION

AWS Certified Cloud Practitioner – 2025

EDUCATION

Bachelor of Technology (B.Tech)
Kandula Srinivasa Reddy Memorial College of Engineering
2016 – 2020 | CGPA: 8.0
